PROFESSIONAL SUMMARY

I'm an AI & ML engineer-in-training who loves turning research ideas into working systems. During my internship at IITM Pravartak I automated data ingestion (reducing manual processing by ~60%), Dockerized services, and built CI/CD pipelines to speed releases; I also prototyped an IoT telemetry module integrated with AWS S3. I work primarily with Python, ML/NLP, cloud platforms, and web technologies (React, HTML/CSS), and I enjoy collaborating with researchers to deliver practical, production-ready prototypes.

EDUCATION

B.E. Computer Science (AI & ML)

K.S. Rangasamy College of Technology, Tiruchengode Sept 2024 — Jun 2028
SCPA - 7.79

HSC

Velavan Matriculation Higher Secondary School, Tiruppur Jun 2023 — Mar 2024
Percentage - 85%

SSLC

Velavan Matriculation Higher Secondary School, Tiruppur Jun 2021 — Mar 2022
Percentage - 75.6%

EMPLOYMENT HISTORY

IT Intern, IITM Pravartak Technologies

Chennai

Mar 2026 — Present

Led hands-on contributions to product development and operations at IITM Pravartak: developed Python scripts and Dockerized services to automate data ingestion, cutting manual processing time by ~60%; built CI/CD pipelines with Git/GitHub Actions and container-based deployments to reduce release time; prototyped an IoT telemetry module and integrated it with AWS S3 for near real-time data storage; performed system troubleshooting and user support, prepared technical documentation and demos, and collaborated with researchers to translate requirements into working prototypes.

Virtual Internship, AICTE

Tiruchengode

Jul 2025 — Sept 2025

Completed a virtual internship focused on applied AI and ML. Developed a personalized RAG proof-of-concept including document ingestion, chunking, embedding generation and FAISS-based retrieval, plus prompt engineering for LLM responses. Exposed functionality via a REST API and simple UI for evaluation, conducted model evaluation.

STARTUP

ORBIS — Freelancing Agency
May 2026 — Present

PROJECTS

Velan Pannai E-commerce Site

Jun 2026 — Ongoing

Building an e-commerce website for selling milk and ghee, covering product listings, cart and checkout flow, and order management for a farm-to-consumer dairy business.

Voter Identity Verifier System

Dec 2025 — Oct 2026

Designed and implemented a Dockerized voter identity verification system combining CNN-based face matching (ResNet-50 fine-tuned) and OCR for ID documents; achieved ~94% matching accuracy and reduced per-verification time by ~70%. Deployed as a RESTful microservice with AWS S3 storage, automated tests, and CI/CD for reliable releases.

Personalized RAG System

Sept 2025 — Mar 2026

Built a personalized Retrieval-Augmented Generation pipeline to produce context-aware responses from user documents. Implemented document ingestion, chunking, embedding generation, FAISS-based semantic retrieval, and prompt engineering for LLM generation; wrapped the stack with an API and lightweight UI for testing. Focused on relevance, latency, and controllable prompt templates to improve answer usefulness in real-world queries.

CERTIFICATION

Anthropic Certificate: Introduction to Agents 2026

Anthropic Certificate: Claude Code in Action 2026
